*Other includes falls, drowning, motor vehicle, fire/burns and other causes of suicide.

Suicide deaths are preventable.

Storing firearms safely, locked and unloaded, can greatly reduce the risk of firearm-related injury and death.

1/3 of youth suicides and unintentional deaths are prevented by securing firearms.
Monuteaux, Azrael, Miller, JAMA Pediatr. 2019

Storing ammunition in a locked location separate from firearms can reduce the risk of firearm injury, especially in households with children.

Although most suicides were among urban youth (74%), rates were higher for youth in rural counties.

Circumstances surrounding youth suicide varied by sex.

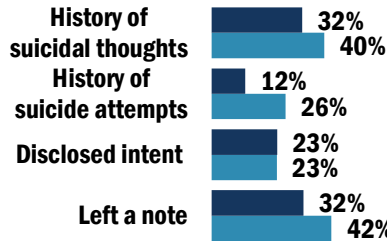

- More male youth suicide victims experienced a school problem, non-alcohol substance use problem, or criminal legal problem than female youth.
- More female youth had a current mental health problem and a history of suicidal thoughts and attempts.
- Suicide attempts among youth are often impulsive. More youth (48%) experienced a recent or imminent crisis associated with their suicide than other age groups (41%).
- Don't be afraid to have a conversation about mental health or suicide. More than one fifth of youth (23% of males and 23% of females) disclosed their suicidal intent before they died.

Factors that can help to protect someone against suicidal ideation or behavior include:

- Effective coping and problem-solving skills
- Strong social and family connections
- Access to quality mental health care
- Support from religious or social communities
- Removing access to means of self-harm
